

# Multihog<sup>®</sup>

One Machine - One Driver - Endless Applications

### Combi Box Snow Plough & Brush - Vertical MCBPV SC

- Front-mounted heavy duty combination box snow plough & brush attachment, specifically designed for airport and municipal use on our MH & MX ranges
- The combi unit allows the operator to seamlessly switch between ploughing and brushing snow at the push of a button, without leaving the cabin
- Fitted with wings which can be adjusted vertically up and down, to assist with directional snow clearing if required
- Equipped with the patent-protected "Multihog Auto Centering System", which allows the operator to rotate the combi unit from left to right (+/-32°)
- During rotation, the combi unit is automatically kept in the centre of the Multihog, which greatly improves directional stability whilst pushing or brushing heavy snow
- It also ensures that the plough always clears the pathway in front of the Multihog wheels
- Indicator light illuminates when brush is in operation, making it exceptionally easy to operate - even at night.
- The combi unit is completely controlled from within the cabin, and is available in various sizes, with working widths ranging from 1600 - 2700 mm (5.2 - 8.8 ft)

*Due to our policy of continuous improvement, specifications may change subsequent to publication of this sheet.*

### Combi Box Snow Plough & Brush - Lateral MCBPL SC

- Front-mounted heavy duty combination box snow plough & brush attachment, specifically designed for airport and municipal use on our MH & MX ranges
- The combi unit allows the operator to seamlessly switch between ploughing and brushing snow at the push of a button, without leaving the cabin
- Fitted with wings which can be adjusted laterally in and out, to increase snow plough width if required
- Equipped with the patent-protected "Multihog Auto Centering System", which allows the operator to rotate the combi unit from left to right (+/-32°)
- During rotation, the combi unit is automatically kept in the centre of the Multihog, which greatly improves directional stability whilst pushing or brushing heavy snow
- It also ensures that the plough always clears the pathway in front of the Multihog wheels
- Indicator light illuminates when brush is in operation, making it exceptionally easy to operate - even at night.
- The combi unit is completely controlled from within the cabin, and is available in various sizes, with working widths ranging from 1600 - 2700 mm (5.2 - 8.8 ft)
