

Multihog[®]

One Machine - One Driver - Endless Applications

Combi Snow Plough & Brush - Standard MCP SC

- Front-mounted heavy duty combination snow plough & brush attachment, specifically designed for airport and municipal use on our MH & MX ranges
- The combi unit allows the operator to seamlessly switch between ploughing and brushing snow at the push of a button, without leaving the cabin
- Equipped with the patent-protected "Multihog Auto Centering System", which allows the operator to rotate the combi unit from left to right (+/-32°)
- During rotation, the combi unit is automatically kept in the centre of the Multihog, which greatly improves directional stability whilst pushing or brushing heavy snow
- It also ensures that the plough always clears the pathway in front of the Multihog wheels
- Indicator light illuminates when brush is in operation, making it exceptionally easy to operate - even at night.
- The combi unit is completely controlled from within the cabin, ensuring the operator remains warm & dry
- Creates a 3-in-1 machine when combined with the de-icing sprayer, ideal for airport use
- Available in various sizes, with working widths ranging from 1600 - 2700 mm (5.2 - 8.8 ft)

Due to our policy of continuous improvement, specifications may change subsequent to publication of this sheet.
