One Machine - One Driver - Endless Applications

Glycol Recovery Unit MGRU 1500

- Ideal for recovering glycol run-off from de-icing booms operating airside
- High performance suction fan removes most kinds of liquid from water to glycol
- Two hydraulically adjustable suction nozzles are attached to the rear-mounted hopper
- After collection the liquid can be drained via the drainage coupling or via the rear door
- 2 service openings on either side of the hopper offer maximum access for cleaning and maintenance
- All exposed parts are manufactured from high quality stainless steel for long life
- The hopper volume is 1.5m³ (53 ft³)
- Each of the two suction nozzles is 750 mm (29") wide
- The unit is environmentally friendly, as collected glycol can be driven to an on-site facility for recycling

Due to our policy of continuous improvement, specifications may change subsequent to publication of this sheet.
